

**CS Pathways Device Only
Program and Output Monitoring Data Entry Instructions**

Please use these instructions to guide data entry for the program output and monitoring portions of the process evaluation.

Youth Google Expedition and Chromebook Use –

- a. The total number of times that devices are used by youth in the CS Pathways project, duplicate counts included. For example, if a youth participates in 6 sessions of a program, and uses a device each time, you would count that youth as having used the device 6 times. The goal of this metric is to assess how much the devices are being used.
- b. The total number of times the devices are used by youth in ANY 4-H program, whether or not CS-related. This includes 4-H activities as well as 4-H support, such as completing a registration process online.
- c. Counts for a & b are combined into one number that is reported

Note: Report ONLY additional numbers for each reporting period – not cumulative.
